

Why Select Air Hoods are Superior

1. HOODS ARE FULLY WELDED –REDUCING HAZARD OF FIRE ESCAPING FROM THE HOOD

This feature used to be found on most hoods- but it adds cost to the hood, so many manufacturers stopped offering it. Given the severity of grease fires, there is a trend back to them

2. HOODS ARE FABRICATED USING 304 SS ONLY

Inferior 420 SS (more pitting, less durable) is not used

3. HOODS HAVE LENGTH-WISE STIFFENERS TO STRENGTHEN HOOD

4. HOODS HAVE DOUBLE WALL SIDES TO STRENGTHEN HOOD AND MAINTAIN HOOD SQUARE

5. GREASE TROUGH SLOPES BOTH DIRECTION IN HOODS OVER TWELVE FEET IN LENGTH

Better grease drainage and less chance of grease cup overflow

6. INNOVATIVE DESIGNS THAT INCORPORATE LATEST RESEARCH FINDINGS FROM ASHRAE TC 5.10

7. FULL RANGE OF MAKE UP AIR PLENUMS FOR GREEN DESIGN
